

Cyber and Digital Resilience

Cyber and resilience are board matters now, examined as closely as any financial control. We uplift the security and digital resilience of organisations that cannot afford to fail: assessing exposure honestly, closing the gaps that carry real consequence, and building the governance and response capability to withstand an incident and recover within tolerances the board has set. Our work is anchored in the frameworks that count in Australia: the Essential Eight and ISM, ISO 27001, CPS 234 and CPS 230 for APRA-regulated entities, and SOCI Act obligations for critical infrastructure. Compliance is the floor. The standard we build to is genuine resilience, tested against realistic conditions, and reported in language a board can stand behind.

The Precision Approach

Assess without flattery

The exposure assessment reports what we find, ranked by consequence, including the findings that are awkward for the people who commissioned it.

Compliance as a floor

Essential Eight, ISO 27001, CPS 234, CPS 230, and SOCI obligations are mapped and met, then exceeded where the threat justifies it.

Third parties are part of the perimeter

Material service providers are assessed, contracted, and monitored as CPS 230 expects, because your resilience now includes theirs.

Close what matters first

Remediation is sequenced by real-world attack paths and business impact, so early spend removes the exposure that actually hurts.

Resilience is rehearsed

Incident response, continuity, and recovery are exercised with executives and boards against severe but plausible scenarios, and tolerance breaches are surfaced honestly.

Instrument the defence

AI-assisted detection, control monitoring, and reporting keep the security position current between annual reviews.

Key deliverables

Structured by discipline. Shaped to your programme.

Know your exposure

- ◆ Security and resilience exposure assessment ranked by business consequence
- ◆ Essential Eight maturity assessment with target maturity recommendation
- ◆ Security architecture review with prioritised design remediations

Meet the obligations

- ◆ ISO 27001 gap assessment and ISMS establishment or uplift plan
- ◆ CPS 234 compliance assessment: capability, policy, testing, and notification readiness
- ◆ Critical operations tolerance map (CPS 230)

Close what matters first

- ◆ Essential Eight uplift roadmap with sequenced, costed remediation
- ◆ Identity and privileged access uplift plan
- ◆ Vulnerability and patch management uplift with measurable service levels

Govern from the board down

- ◆ Board cyber governance framework: reporting, appetite, and accountability
- ◆ Cyber risk appetite statement and tolerance settings for board endorsement
- ◆ Control testing and assurance calendar across the three lines

Rehearse the bad day

- ◆ Incident response plan with scenario playbooks (ransomware, data breach, third-party failure)
- ◆ Executive and board cyber crisis exercise with observed findings report
- ◆ Business continuity and disaster recovery plans tested against tolerances

Representative artefacts; the playbooks run deeper than this page.

The Precision Difference

Fluent in the frameworks that count

Essential Eight and ISM, ISO 27001, CPS 234 and CPS 230 for APRA-regulated entities, and SOCI Act obligations for critical infrastructure.

Assessed without flattery

The exposure assessment reports what we find, ranked by business consequence, including the findings that are awkward for the people who commissioned it.

Resilience rehearsed with the board

Incident response, continuity, and recovery are exercised with executives against severe but plausible scenarios, and tolerance breaches are surfaced honestly.

Senior only. Fiercely independent. 94.3 per cent on-budget across AU\$2.3 billion governed since 1996.

If CPS 230 or a SOCI obligation has landed on your desk, or the board has asked whether the organisation would withstand a serious incident, the honest answer starts with an independent read of your exposure.

If it matters, we should talk.
