

Enterprise Consulting

We work where strategy meets execution, so decisions taken in the boardroom carry a credible path to delivery. Our advisers have held the CIO, CTO, and Programme Director roles they now advise on, and they bring the judgement that comes from having delivered in environments like yours. The work spans operating model and organisation questions, technology and digital strategy, regulatory uplift, and independent counsel on the calls that carry the most consequence. Every recommendation arrives with the economics, the risks, and the delivery path attached, because advice that cannot be executed is opinion. We stay rare among advisers: willing to be held to what we recommended.

The Precision Approach

Start from the boardroom

We work from the strategic intent and the decision the executive actually has to make, then build the evidence and options around it.

Evidence over assertion

Options are costed, risks are quantified where the data allows, and market claims are tested rather than repeated.

Use AI where it sharpens the work

Market scanning, document analysis, and scenario modelling are AI-accelerated, and senior judgement makes the call.

Bring lived experience

Advice comes from practitioners who have held the roles in question and carry the scar tissue of delivery, so recommendations are shaped by what survives contact with reality.

Make it deliverable

Every strategy ships with a sequenced roadmap, an investment case, and the governance to run it, ready for funding processes and Gateway scrutiny.

Leave capability behind

We build the ownership, governance, and skills for the client to carry the strategy without us.

Key deliverables

Structured by discipline. Shaped to your programme.

Frame the decision

- ◆ Strategic options paper with costed, risk-weighted alternatives
- ◆ Board and executive advisory papers on consequential decisions
- ◆ Investment logic map linking problem, intervention, and benefit
- ◆ Strategic risk assessment and board risk appetite discussion paper

Set the direction

- ◆ Technology and digital strategy with sequenced, funded roadmap
- ◆ Enterprise architecture position and target-state assessment (TOGAF informed)
- ◆ Operating model assessment with heat-mapped improvement priorities
- ◆ Organisation and capability review with SFIA-informed skills baseline

Test before you commit

- ◆ IT financial and cost transparency review with savings pathways
- ◆ Vendor and sourcing strategy with negotiation levers and market test design
- ◆ Due diligence reports for major technology or partner commitments
- ◆ Regulatory and compliance gap assessment with remediation roadmap

Fund it and govern it

- ◆ Business case development to first and second pass investment standard
- ◆ Governance design for major initiatives: committees, delegations, reporting
- ◆ Benefits framework tying the strategy to measurable value

Move to execution

- ◆ Transformation roadmap with staging, dependencies, and decision points
- ◆ Executive workshop series with decision-ready materials and facilitation
- ◆ Implementation mobilisation pack: plan, structure, roles, first 90 days
- ◆ Quarterly strategy health check against the committed roadmap

Representative artefacts; the playbooks run deeper than this page.

The Precision Difference

Advisers who have held the seat

Our advisers have held the CIO, CTO, and Programme Director roles they now advise on.

Advice with the delivery path attached

Every recommendation arrives with the economics, the risks, and a sequenced path to execution, ready for funding processes and Gateway scrutiny.

Willing to be held to it

We stay rare among advisers: willing to be held to what we recommended.

Senior only. Fiercely independent. 94.3 per cent on-budget across AU\$2.3 billion governed since 1996.

If a consequential technology or organisational decision is heading for your board and you want it tested by people who have made the call before, that is when to bring us in.

If it matters, **we should talk.**
